

SEARCH TECHNIQUES

DIRECT

- ① Exposed mineralisation - visual inspection; tin shed into drainage system.
- ② Drilling.

INDIRECT

- ③ Electrical I.P. sounding to detect
 - a. resistivity contrast between granite types.
 - b. I.P. response from sulphides associated with mineralisation.
- ④ Geochemical sampling of soil to detect: mercury dispersion from Zn-Ag mineralisation
tin, copper, zinc dispersion via mechanical, hydromorphic leakage.
