

5. DISCUSSION AND RESULTS

090

Figure 1 illustrates recovery of tin to 2.96 S.G. sinks for the four holes tested. It can be seen that recoveries of over 90 percent were maintained at sizes up to 400 microns for the four samples, with the most coarse recovery at 90 percent attained at 1100 microns for BT 68.

Figure 1: Sinks Tin Recovery and Size.
