

- a. Sample SC1/BF; PS22460
 Cassiterite grains (C) included within non-opaque grain which also contains small pyrrhotite (Po) intergrowth. Angular grain (A) at bottom of field is arsenopyrite. Yellow sulphide grains are mainly pyrrhotite.

- b. Sample SC1/BF; PS22460
 Cassiterite (C) intergrown with pyrrhotite (Po). Grain A is same arsenopyrite as in field a. Lower part of field has small liberated cassiterite (C) and stannite (St) grains. Yellow sulphide grains are mainly pyrrhotite.
