0-9.4 Probably DOLOMITE
(9.4) Very broken and poor recovery
Orange weathered/decomposed clayey chalk

9.4-12.6 Probably DOLOMITE
(3.2) Pale grey/white medium grey sugary quartz and ? carbonate

12.6-102.6 DOLOMITE
(89.8) Pale grey/white/cream
Generally massive, sometimes highly brecciated
Minor grey dolomite veins
Rare thin (<5mm) carbonate veins
Rare thin (<1cm) black ?Py/Mn stringers/irregular
Rare thin irregular pyrite stringer
16.8-19.8: Occasional small pockets (up to 3cm) of recrystallized dolomite

27.61 10mm grey/green talc band

76.1: 5mm Dolomite/Silicate bnds: Quartz/carbonate with 5% pyrite. Mineralised

98.3-100.21 Some selective replacement and parched replacement, & small breccia blocks by pale green talc. 1-2% of rock is replaced

102.6-109.4 SILTSTONE/QUARTZITE
(7.0) Medium grey
Poorly bedded, much disrupted
Quartzite is slightly bioturbated
102.6-102.7: Contact & partly replaced by black serpentinite
Rare veins, occasional stringers

END OF HOLE 109.4m
