

GEOLOGY - based on soil auger sites spacing 40m x 120m.
 - B. Plotnik 2811-80-1-2, 80.
Soil Outcrop - Although surface is poor, the deep soils (0.5-1.2m) are derived from the underlying bedrock, transported soils being minimal.
 Organic horizons in the soils are virtually absent.

- TERTIARY**
 Bushy vesicular massive
- CAMBRIAN**
 Creosote tuff, silstone mudstones and minor chert grey green to pink.
- PRE-CAMBRIAN**
 Silstone grey to black and quartzite micaceous

- KEY**
- Dip and strike
 - Schistosity
 - Approx. geological boundary
 - Track
