

DRILL ADVANCE				LITHOLOGY					017108	
DEPTH	DRILL ADVANCE INTERVAL	CORE RECOVERY	PERCENT RECOVERY	INTERVAL	DESCRIPTION	ALTERATION	GRAPHIC LOG	STRUCTURE	MINERALISATION	VISUAL PERCENTAGE MINERALISATION
75.3	3.0	3.0	100%							
76.3	1.5	1.4	93%	75.4 - 76.9	140 mm zone of bedded whitish medium feldspathic sandstones with thin interbedded black argillite layers and black intraclast flakes.					
79.8	3.0	2.9	96%	76.9 - 80.4						
82.9	5.2	5.1	98%	76.9 - 82.9				Bedding to core axis: 22°		
86.2				85.2 - 86.2	10 mm zone of whitish feldspathic sandstone and thin interbedded dark carbonaceous mudstone. Definite presence of carbonate & 2% contained within sandy horizons				Very minor pyrrhotite disseminated within the core, often taking place of pyrite. Pyrrhotite continues intermittently to the end of the hole.	pyrr 20-5%
88.0	4.8	4.7	98%	82.9 - 88.0
