SOUTH ESK

MONTHLY PROGRESS REPORT TO DEPARTMENT OF MINES

MARCH 1981

EXPLORATION LICENCE 22/80 TASMANIA

1. INTRODUCTION

Drill sampling of the alluvial material in the South Esk River valley continued. Nine holes were completed and samples despatched for gold content determination. Colours of gold are noted in the logs for four (4) of the holes completed.

The Field Progress Report for March 1981 is attached as an appendix. Geological logs of the holes completed during the month are also attached.

A number of assay results were received during March. Copies of the laboratory result sheets are attached.

2. TENEMENT

Exploration Licence 22/80 was renewed to 28th August 1981 in the name of Australian Anglo American Searches Proprietary Limited.

It encompasses 258 square kilometres of land in the Land District of Cornwall, vicinity of Fingal.

The area is described as commencing at the Posted Notice situate at the south-west angle of the area whose grid co-ordinates are 577 000 metres E, 5 390 200 metres N, thence grid north to 5 410 000 metres N, grid east to 590 000 metres E, grid south to 5 390 200 metres N, aforesaid thence grid west to the point of commencement.

Plan TAS-9-4 shows the location of the licence.

3. WORK ACCOMPLISHED

Drilling progress for the Stage 1 sampling programme is shown on plan TAS-9-9.

The following drill holes were completed during the month:- E4, E3A, E5; B1A, B6, B7; C6, C7 and C8.

While casing was stuck in hole E5 the opportunity was taken to drill shallower holes to complete sections along lines B and C. The drill returned to line E to commence hole E6 at the end of the month when extra casing was available.

002

Compass, tape and abney level surveying of the drill lines continued.

4. RESULTS ACHIEVED

Geological sections available to date are attached as plans TAS-9-10 through 14.

Gold content results for panned concentrate samples were received for the following holes:-

C1, C2, C3, C4, C5; D1, D2, D3;
E1, E2, E3, E3A, E4.

Total gold content of the concentrate was determined by normal fire assay. Results were expressed initially as ppm but thereafter as milligrammes of gold.

Laboratory result sheets are attached.

At the present time drilling is too widespaced to attempt any bedrock contouring exercise looking for a channel. Bedrock as shown on cross sections for lines A and B is considered probably in fact to be much shallower due to non-recognition of weathered bedrock early in the drilling programme.

Results from lines C, D and E indicate an increase in thickness of alluvium going south and the possible development of a channel. Intermediate drill lines (and holes) should elucidate the position.

Gold is indicated to be scattered throughout the alluvium but at present no definite pattern can be said to exist.

5. FORWARD PROGRAMME

Complete the Stage 1 drilling programme. Position extra drill lines between lines C and D and lines D and E and probably south of line E. This will enable bedrock contours to be determined in a much more acceptable manner.

A much better idea of the volume of the alluvials will then be available as will the distribution of the gold. Patterns of gold concentration are not expected to be indicated until fill-in drilling is commenced i.e. shortening the interval between holes once valley cross-sections have been established.

SOUTH ESK PROJECT

FIELD PROGRESS REPORT - MARCH 1981

EL 22/80 - TASMANIA

1. SUMMARY

Drill sampling of the alluvials continued. Nine holes were drilled and sampled. Surveying of drill lines A to E was extended.

2. WORK COMPLETED

2.1 Surveying

Tape compass and abney level surveying was continued on Line A from drillhole A2 to 145m north of the river on a bearing of 170° (magnetic).

Line B was surveyed from hole B1 over 1200m bearing 241° (magnetic) and from drillhole B5 over 400m bearing 075° (magnetic). Drillholes B6 and B7 were located 200m and 400m, respectively, from the edge of the river.

Line C was surveyed over a distance of 308m from drillhole C1 bearing 226° (magnetic), and over 623m from the river, bearing 055° (magnetic). Drillholes C6, C7 and C8 were located 100m, 400m and 600m respectively from the river.

Line D was surveyed over a distance of 1175m on the western side of the Mathinna Road, bearing 275° (magnetic). Drillholes D4, D5 and D6 were located 50m, 450m and 750m, respectively, from the road.

This line was also extended across the river from drillhole D3, bearing 075° (magnetic) over a distance of 142m.

Line E was surveyed over 500m bearing 255° (magnetic) from drillhole E1. Drillhole E1-A was positioned 300m from E1 on this line.

2.2 Drilling

Drillhole E4 was completed and drillholes E3-A, E5, B1-A, B6, B7, C6, C7 and C8 were drilled and sampled.

2.2.1 Line B

Drillhole B1-A commenced on 18.3.81 in ochre sands and gravels. The remainder of the material intersected was mainly ochre sandy clay. The hole terminated at 14m in weathered grey shales.

...2.

Drillhole B6 commenced on 15.3.81 in brown sand. Gravels and coarse sands were intersected to 3m and clays to 4.5m. The hole terminated at 5.5m in grey shales.

Drillhole B7 commenced on 16.3.81 in brown sand. Clays and sandy clays were intersected to 5m and the hole terminated at 6m in grey shales.

2.2.2 Line C

Drillhole C6 commenced on 18.3.81 in brown sands and silt. Coarse sands and gravels were intersected between 2 and 6m and clays from 6 to 8m. The hole terminated in weathered grey shales at 9m.

Drillhole C7 commenced on 17.3.81 in brown sands and silt. Coarse sands and gravels were intersected from 2 to 4m and grey clay from 4 to 6m. The hole terminated at 7m in pyritic grey shales with quartz veins.

Drillhole C8 commenced on 16.3.81 in sandy gravels which continued to a depth of 5m. Clays and sandy clays were intersected to 10m and the hole terminated at 11m in grey shale. Several colours of gold were noted in the samplesfrom 1 to 5m.

2.2.3 Line E

Drillhole E4 which commenced on 20.2.81 in brown sands and ochre clays, intersected 4m of gravels and coarse sand and from 6.0m to 28m, grey sandy clays with wood and coal fragments. From 28.0m coarse sands and gravel occurred, with coal fragments and pyrite. At 34.5m core was taken. This included 0.15m of pebbly conglomerate with a quartz and pyrite matrix. The remainder of the core consisted of inconsolidated layers of coarse sand and coal fragments. From 35.5 to 39m, material consisted of grey-black clayey sands, becoming gravelly to 41m. Core was again taken from 41-42m, where the hole was terminated. The core consisted of a conglomerate of quartz and sandstone pebbles and cobbles in a muddy matrix with some pyrite.

Colours of gold were seen in samples from 3-6m, 9-10m, 16-17m and 29-30m.

Drillhole E3A commenced on 27.2.81 in sands and gravels. Coarse sands and gravels were encountered to 7m. Grey clays with coal fragments occurred to 10m. Clays and sands were encountered to 28m. Coal fragments occurred with the sands and clays from 28 to 38m. Gravels occurred with the sands and clays to 41m. The hole was cored from 41-42m. The core recovered was a conglomerate of pebbles, cobbles and boulders in a quartz gravel and silica matrix. Colours of gold were noted in panned concentrtes from samples 5-6m, 11-12m, 13-14m, 16-17m, 18-22m, 23-24m, 25-26m and 34-35m.

...3.

005

Drillhole E5 commenced on 5.3.81 in brown sands. Coarse sands and gravels were encountered to 4m, and ochre clays from 4-5m. From 5 to 18m grey clays and sands with coal fragments occurred. Coarse sands and gravels with coal fragments occurred from 18 to 35m.

Pyrite occurred in samples from 26m. The hole was cored from 35-36m. Core recovered was a conglomerate of large pebbles of quartz and sandstone in a quartz gravel matrix. Gold was seen only in one sample, from 24-25m.

3. FUTURE PROGRAMME

Drilling and sampling will continue.

S. M. Douglas

24.3.81

I, OSVALDO TIBURCIO FILOMENO FONSECA of 56 Partridge Crescent, Frankston in the State of Victoria, Accountant DO SOLEMNLY AND SINCERELY DECLARE as follows:

1. That the details of our work during the month ended 31 March 1981 on Exploration Licence No. 22/80 are described in the accompanying report.

2. That in the month of March 1981 we have expended $39 798 on work on Exploration Licence No.22/80 and that this is further broken down into:

	$
(a) Salaries and wages, including technical services	7 027
(b) Contractors,plant,drilling etc	12 188
(c) Management,accounting and Secretarial	6 301
(d) Field expenses, meals accommodation	13 592
(e) Tenement costs	690
(f) Capital expenditure	-
	$39 798

3. That total expenditure upon the Exploration Licence 22/80 to 31 March 1981 is $105 180.

AND I MAKE this solemn declaration conscientiously believing the same to be true and by virtue of the provisions of an Act of the Parliament of Victoria rendering persons making a false declaration punishable for wilful and corrupt perjury.

DECLARED AT Melbourne)
)
in the State of Victoria)
)
this 16th. day of) O. Fonseca.
)
April. 1981)

Before me:

A Commissioner for taking Declarations and Affidavits under the Evidence Act 1958.
