

3.3 Sheet No. 4239.

<u>Anomaly No.</u>	<u>Comments</u>
1, 589.852	This is the western end of the plug noted on sheet 4339.
2, 584.824	On north side of hill. Susceptibility looks too high for basalt. May be related to anomaly 3.
<i>LORINNA EAST.</i> 3, 580.8082	Shape is unusual and requires the southern wall to be dipping south. Susceptibility is moderately high. May be small plug. Seems to occur very close to pre-cambrian basement.
