

094

- Costeaming and infill gridding over anomalies defined by the above program.

Voyager 22

- Detailed mapping of the Voyager 22 grid at a scale of 1:2500.
- Infill gridding and geochemical sampling on the southern part of the grid.
- Costeaming across peaks of geochemical anomalies.
- Reconnaissance gridding and sampling north of Voyager 22 concentrating on the volcanics adjacent to the unconformity.

Voyager 9

- Drill the Pb-Zn soil anomaly on the eastern margin of the grid.
- Drill one deep hole into the magnetic anomaly after geophysical modelling for targetting purposes.

Voyager 31

- Extend the Voyager 19 grid to the west across Copper Creek initially at 200m line spacing.
- Mapping, C-horizon soil sampling along the grid lines.
- Systematic rock chip sampling, and mapping of the main zone of mineralization along Copper Creek.
