

S3

S416 184N, 1070mE Sheared and deformed acid volcanic rock which was
TSC33713 40m → N either rhyolite or rhyodacite. Original textures
have not been sufficiently well preserved to show
whether it was a pyroclastic or lava flow but the
former is more likely.

S417 168N, 360mE Deformed rhyolite which could have been a lava flow.
TSC33714 It contains minor secondary iron oxide.
