

3. LAND TENURE

3.1. EL 11/76

E.L. 11/76 covers 88 sq.km. It is held by Renison Limited. Included within the licence are 5 mineral leases covering a total of 76.3 ha. For details the reader is referred to Roberts 1981.

3.2. SPL 129

SPL 129 covers 46 sq.km. It is currently held by Mt. Lyell Mining and Railway Co. Ltd.

Within the licence area a number of leases are held by other parties. At the time of writing the previous report, holders of the two adjoining leases over the Kelvin and Maynes Mine were awaiting ministerial approval of a court decision which has since been handed down. ML 90M/72 is currently held by K. McDermott and ML 4M/74 by F. Griffiths. Following this year's work on anomaly 2 on the Agnew Grid it is apparent that the lease ML 90M/72 is prospective. Further work on anomaly 2 will require an option agreement with McDermott.

For information on other mining leases within SPL 129 the reader is referred to Roberts (1981).
