

10.3. Stonehenge Area - East End SPL 129

It will be necessary to establish a grid to cover the EM anomalous zone as well as the magnetic anomaly. It is recommended that the grid be cut at approximately 020 AMG, perpendicular to the trend of the EM anomalous zone. The gridlines should be spaced 200m apart and cover an area of approximately 4.5 km<sup>2</sup>. (Figure 5)

Gridding should be followed by bedrock sampling and electrical geophysics, however detailed proposals must await an analysis of the Dighem data by Bishop.
