ELECTROLYTIC ZINC CO. OF A'ASIA LTD.  
ROSEBERY - TASMANIA

DIAMOND DRILL CORE RECORD

HOLE No. CHP 238

A 11241

FOOTAGE		ROCK DESCRIPTION	MINERALISATION	SAMPLE No	8-13 FROM	14-19 TO	CORE REC'D	ASSAY DATA							CORE REC'D			
FROM	TO							Sample Length	20-25 Pb%	26-31 Zn%	32-37 Cu%	38-43 Ag. g/t	44-49 Au. g/t	50-55 Fe%	RUN	SHORT		
42.3	43.4	Grey, fine grained, siliceous wacke. Sparse thin carbonate veins.																
43.4	54.0	Grey and dark grey "Crackle breccia" formed by soft sediment? brecciation of wacke and siltstone with rehealing by quartz-carbonate veinlets. 30cm massive quartz-carbonate after 48.6	Irregular thin pyrite veins 46.4 - 46.8 Some magnetite with minor pyrrhotite at 52.8															
54.0	58.0	Green grey and grey fine grained wacke and siltstone. Minor irregular quartz-carbonate veining																
58.0	62.4	Dark grey and grey fine grained wacke	~5% pyrrhotite as thin blebs along bedding and as veinlets.															
62.4	65.9	Grey, medium grained ? dolomite with carbonate inclusions in a green grey ground mass. Minor carbonate veining
