ELECTROLYTIC ZINC CO. OF A'ASIA LTD.
ROSEBERY - TASMANIA

DIAMOND DRILL CORE RECORD

HOLE No. *CHP 238*

A 11241

FOOTAGE		ROCK DESCRIPTION	MINERALISATION	SAMPLE No.	8-13 FROM	14-19 TO	CORE REC'D	ASSAY DATA								CORE REC'D	
FROM	TO							Sample Length	20-25 Pb%	26-31 Zn%	32-37 Cu%	38-43 Ag g/t	44-49 Au g/t	50-55 Fe%		RUN	SHORT
65.9	66.6	Grey and dark grey, interbedded siltstone and shale, brecciated and rehealed by quartz carbonate veins	~5% pyrrhotite as blebs, veinlets and in carbonate veins														
66.6	71.0	Grey fine to medium grained "glomerite" with carbonate pebbles and minor carbonate veins.															
71.0	74.9	Dark grey mudstone with interbedded siltstone in places. Carbonate veining.	~10% pyrrhotite as blebs along bedding and veinlets.														
74.9	76.0	Grey medium grained lithic wacke with rounded mudstone fragments and finer grained rounded detritus in a clayey matrix.	~1% pyrrhotite disseminated throughout.														
76.0	82.9	Grey and dark grey interbedded fine grained wacke, siltstone and mudstone. Some quartz carbonate veining. cba 40° Scour and fill indicate uphole (west) facing.	~10% pyrrhotite as blebs along bedding, disseminated and in veinlets.														
82.9	86.5	Grey and dark grey medium grained calcareous lithic wacke, calcareous siltstone and mudstone.	~1% disseminated pyrrhotite.
