Anomaly 19B-22xA

This four-line conductor is probably due to a fairly wide bedrock conductor. It has an interpreted depth of 30 m and conductance up to grade 2.

Anomaly 20C-22xB

This weak three-line conductor appears to have a wide bedrock source about 30 m deep.

Response 23xA

This poorly defined response could have a bedrock source.

Response 23xB

This is a broad, poorly defined response in a low resistivity zone. It probably has a bedrock source.

Anomaly 23B-26C

This bedrock conductor is best defined at anomaly 26C. It has yielded a low resistivity zone.

Response 23xC

This is a broad, poorly defined response that probably has a bedrock source.
