- within the Razorback/Comet Mine area and extensions (e.g. Lines 24-26).

I do not have the soil/stream geochemical assays but these data along with the geology, would provide an initial step in examining the DIGHEM results. You would also need to establish which anomalies fall within the Razorback/Comet lease area. From then on it is a systematic examination of responses as listed.

I plan to go over all the data with you later this month and perhaps discuss preliminary thoughts with EZI on their interpretation of anomalies within our J.V. area.
