Dear Sir,

I refer to your letter of 5th August, enquiring about a relinquishment report for the Hellyer Gorge (Atlas Area) of Exploration Licence 1/77.

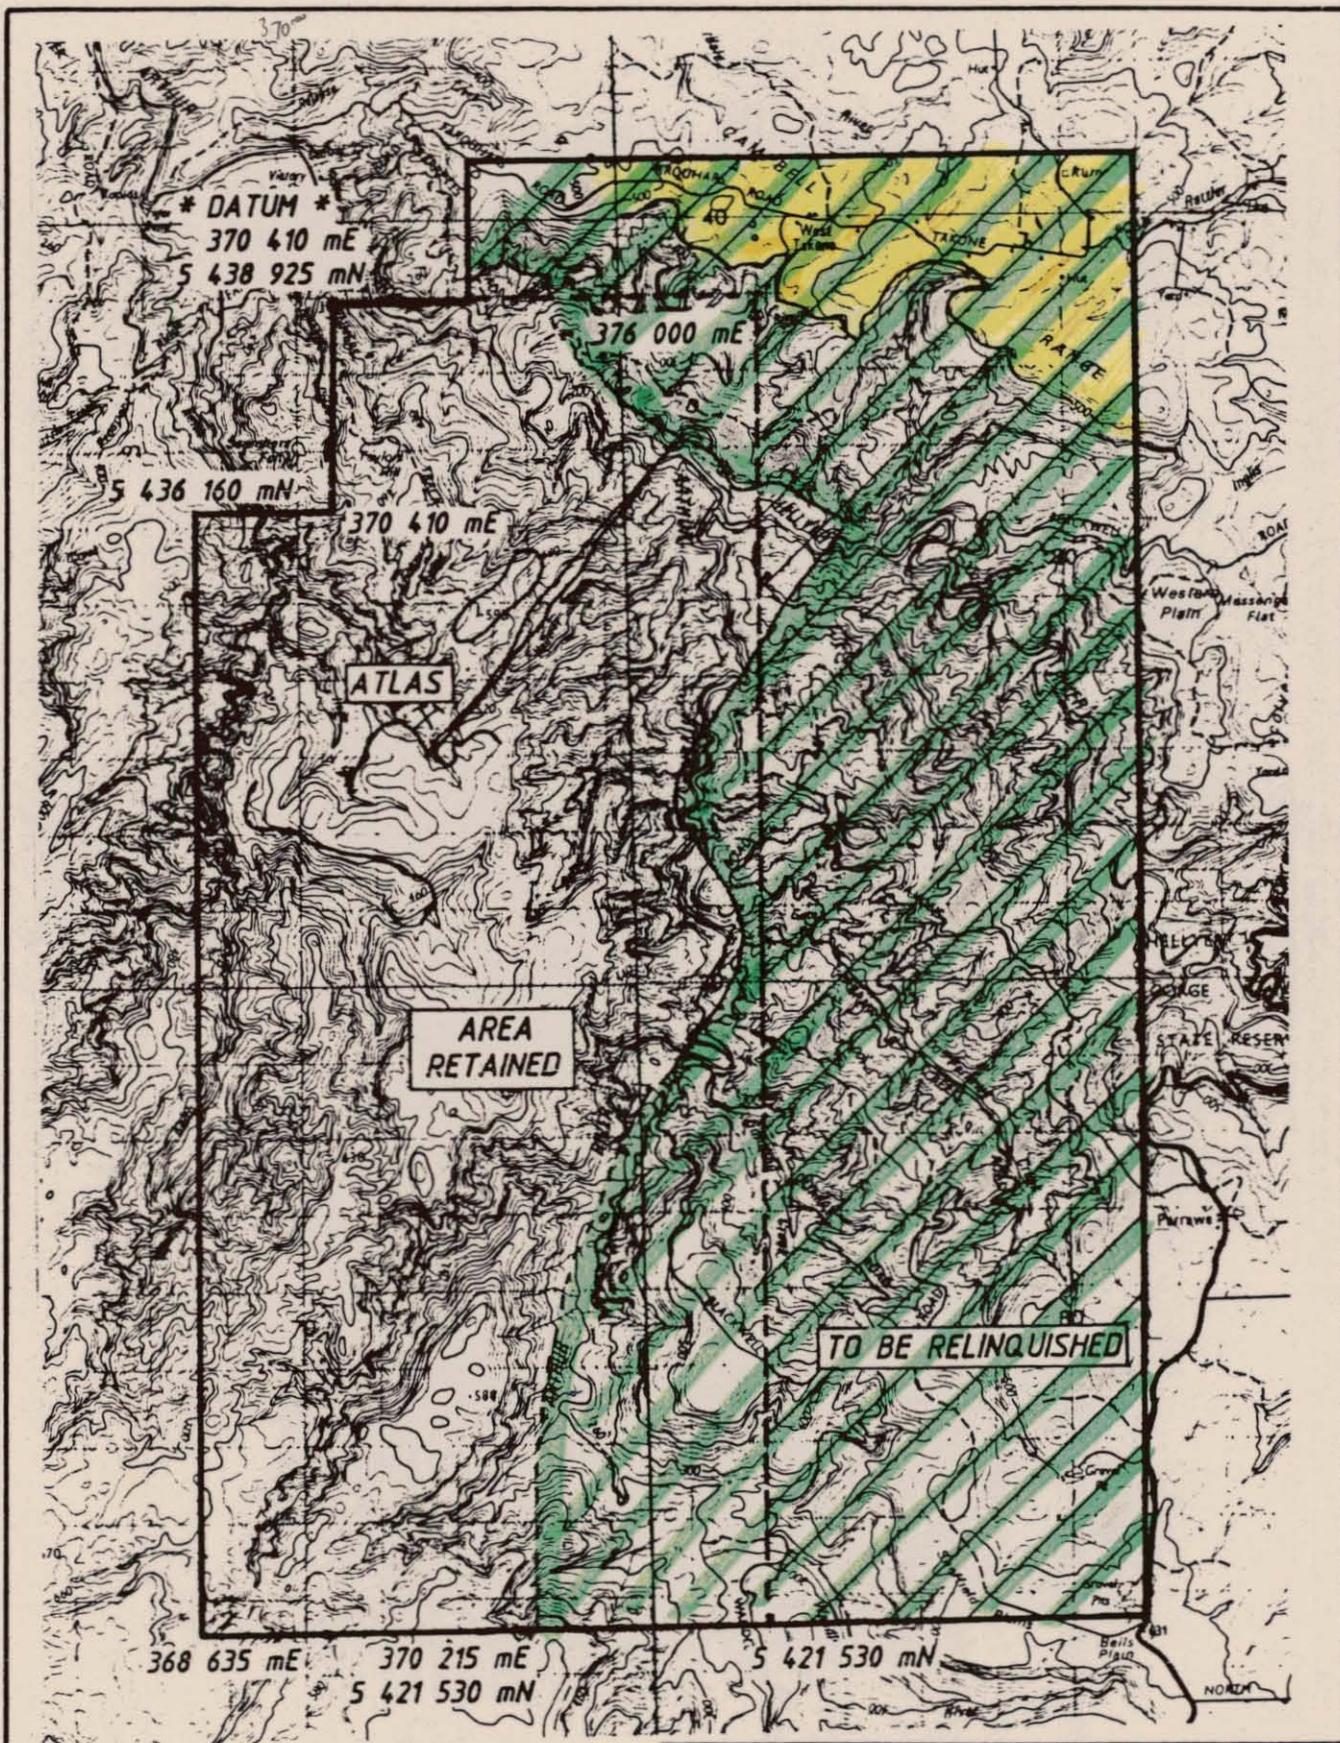

The relinquished area, as shown on the attached plan TASH 1293, is entirely underlain by basal Permian glacial sequences, while some of the higher plateau are covered by Tertiary basalt flows. The relinquished area is considered unprospective for any base metal occurrence and as a result has been excluded from any detailed investigations carried out over Part One of Exploration Licence 1/77.

No geological, geochemical or geophysical surveys have been carried out over the unprospective Permian sequence and as a result no specific relinquishment report has been written.

As no work has been carried out over the relinquished area we ask that you accept this letter as a relinquishment report.

Yours faithfully,

[Signature]
T.W. DICKSON
District Manager
