

<0.01 except for 0.04 ppm in the east Huxley area. (See Appendix ii).

Seven rock chips assayed, this small submission of samples reflecting the paucity of alteration and mineralization encountered in this area. Cu, Pb, Zn, Ag, Ba were assayed at Renison, maximum values:

- No. 11527 Cu 300, Zn 210 ppm, hematite veins in rhyolite at east Huxley.
- No. 11572 Pb 290, Zn 1150 fine siliceous sediment with chlorite/pyrite South Conglomerate Creek - float block may be derived from Mt. Maid area.

Gold was assayed at Genalysis, all <0.01 ppm.
