10.0	18.0	Clay, interbedded grey and pale brown, smectitic
18.0	26.0	Clay, dark grey, sandy, ≈3% lignite fragments
26.0	30.0	Clay, grey/brown/cream

EOH

Comments

- (i) All samples recovered were contaminated
- (ii) The hole is interpreted to have intersected the same Tertiary section seen in PD83 JC-03
- (iii) Because PD83 JC-03 demonstrated the Tertiary cover to be > 54m thick, PD83 JC - 05A was abandoned at 30m.
