

PD83 PT-04

<u>From (m)</u>	<u>To (m)</u>	
0	7.0	Dolerite, oxidised, probable Quaternary scree deposit
7.0	10.0	Dolerite, slightly weathered to fresh
10.0	14.0	Dolerite, fresh.

EOH

Comments

- (i) Hole collared immediately adjacent to Jordon R. and river gravels extend at least to 7m.
- (ii) The shallow watertable combined with unconsolidated gravel, resulted in the PVC casing being broken on several occasions, with the result that the hole was abandoned at 14m.
- (iii) Evidence from the adjacent hole (PD83 PT-04A) indicates the presence of a dolerite dyke in the area, but it is not possibly to determine if the dolerite met from 7-14m was insitu or large float boulders.
