

PD83 PT-07A

<u>From (m)</u>	<u>To (m)</u>	
0	2	Dolerite, slightly weathered, scree deposit
2	8	Dolerite, slightly weathered, to fresh medium grained
8	12	Dolerite, chloritic/Sericitic, medium to coarse grained
12	20	Dolerite, sericitic/chloritic, green clay veinlets, coarse grain size, minor ?chilled margin fragments 18-20m
20	34	Dolerite, sericitic, green clay veinlets, coarse grained

EOH

Comments

- (i) The mineralogy and grain size of the dolerite combined to indicate a substantial body of the same, and accordingly the hole was abandoned at a depth of 34m.
- (ii) The dolerite encountered in this hole appears similar to the dolerite intersected in the bottom of hole PD83 PT-05 to the north.
