

Sample No.	Classification - Composition	Fabric	Accessories	Comments
62838 5371345 376460	Rhyolitic Tuff. Crypto- to microcrystalline quartz with subordinate/variable proportions of sericite. Frequent quartz, subordinate sericitised feldspar crystals/fragments, minor silicified/sericitised rhyolitic lava clasts.	Poorly sorted psammitic fragmental with a vaguely relict shardy-textured matrix. Stressed to phyllitic	Disseminated single grains, small clusters of variably oxidised, sericite pressure-shadowed pyrite.	Rhyolitic lithic-vitric-crystal tuff psammitic, poorly sorted, but conceivably shallow subaqueous. Devitrified, sericitised/silicified pyritised, sheared.
62840 (T.S. 50858 5371350 376515)	Sideritic Conglomerate. Framework of sericitic pelite, quartzose sericitic psammopelite, minor sericitised/silicified felsite clasts. Matrix of sericite-matrixed quartzose fine to medium lithic sandstone with semi-pervasive degraded siderite.	Sand-supported conglomerate with a phyllitic overprint.	Minor clasts of ferruginised "dolomitic" chert. Rare to locally conspicuous detrital chromite.	Oxidised sideritic, weakly acid-volcanomict conglomerate. Chromite partly as thin discontinuous placer in incipiently shale-parted matrix.
