Anomalies 2260A,  
2280D-2300E,  
2300B, 2300C,  
2320xA

These grade 1 and 2 anomalies and x-type responses are associated with a localized conductive zone which may reflect conductive bedrock material. Anomaly 2260A and x-type response 2320xA may be extensions of the main conductor. Note that anomaly 2311B which was interpreted as a buried conductive unit, interpretation symbol G, may reflect the same conductor as 2280D-2300E.
