

A structural setting, somewhat similar to that in the Brilliant area, occurs within the tenements over, or adjacent to, the  $f_8$  fold axis west of Mathinna. The  $f_8/Z3$  intersection is suggested as a more specific zone of interest.

If the ovoid magnetic 'low' (axis L1) is a component in the mineralising process then the southern end of the 'low' is considered to be a 'look alike' setting of the Mathinna area. Hence a general zone of interest T10 is postulated.
