RELINQUISHMENT REPORT
EL 14/94 - ZEEHAN - ALLEGIANCE
L.A. NEUNHAM

RELINQUISHMENT REPORT

Allegiance Mining NL applied for relinquishment of EL 14/94 on 05 May, 1997.

An Annual Report on the EL was submitted in October, 1996:

"EL 14/94 Zeehan Area. Annual Report for Year Ending October, 1996" for Allegiance Mining NL, by L A Newnham, dated 11 October, 1996

In the intervening period from October, 1996 to May, 1997, no further field work was undertaken.

The original exploration target on this EL was base metal sulfides hosted by Bell Shales.

The exploration methodology was to search for this target style by the application of geoelectrochemical techniques.

Subsequent surveys of this type defined a number of anomalies. However, subsequent considerations of the exploration strategy in this area downgraded the area's prospectivity for the target model and attributed the geoelectrochemical anomalies to cultural and previous mine related activities.

Consequently, no further field work was undertaken.
