98-4207

E.L. 13/94 covers an area of 26 km² in the District of Dorset in the vicinity of Sideling Range.

The country rock is Mathinna beds and Devonian granodiorite.

The tenement was considered prospective for vein style gold deposits and metamorphic contact style gold and base metal deposits.

Following reconnaissance ground inspection of the whole licence area, it was decided that three small areas is in fact prospective for this target model.

As a result of this inspection of the whole licence area of 26km², 18.5km² is to be relinquished (see attached map).
