# 98-4208

E.L. 16/95 covers an area of 43 km<sup>2</sup> in the District of Dorset in the vicinity of Georges Plain.

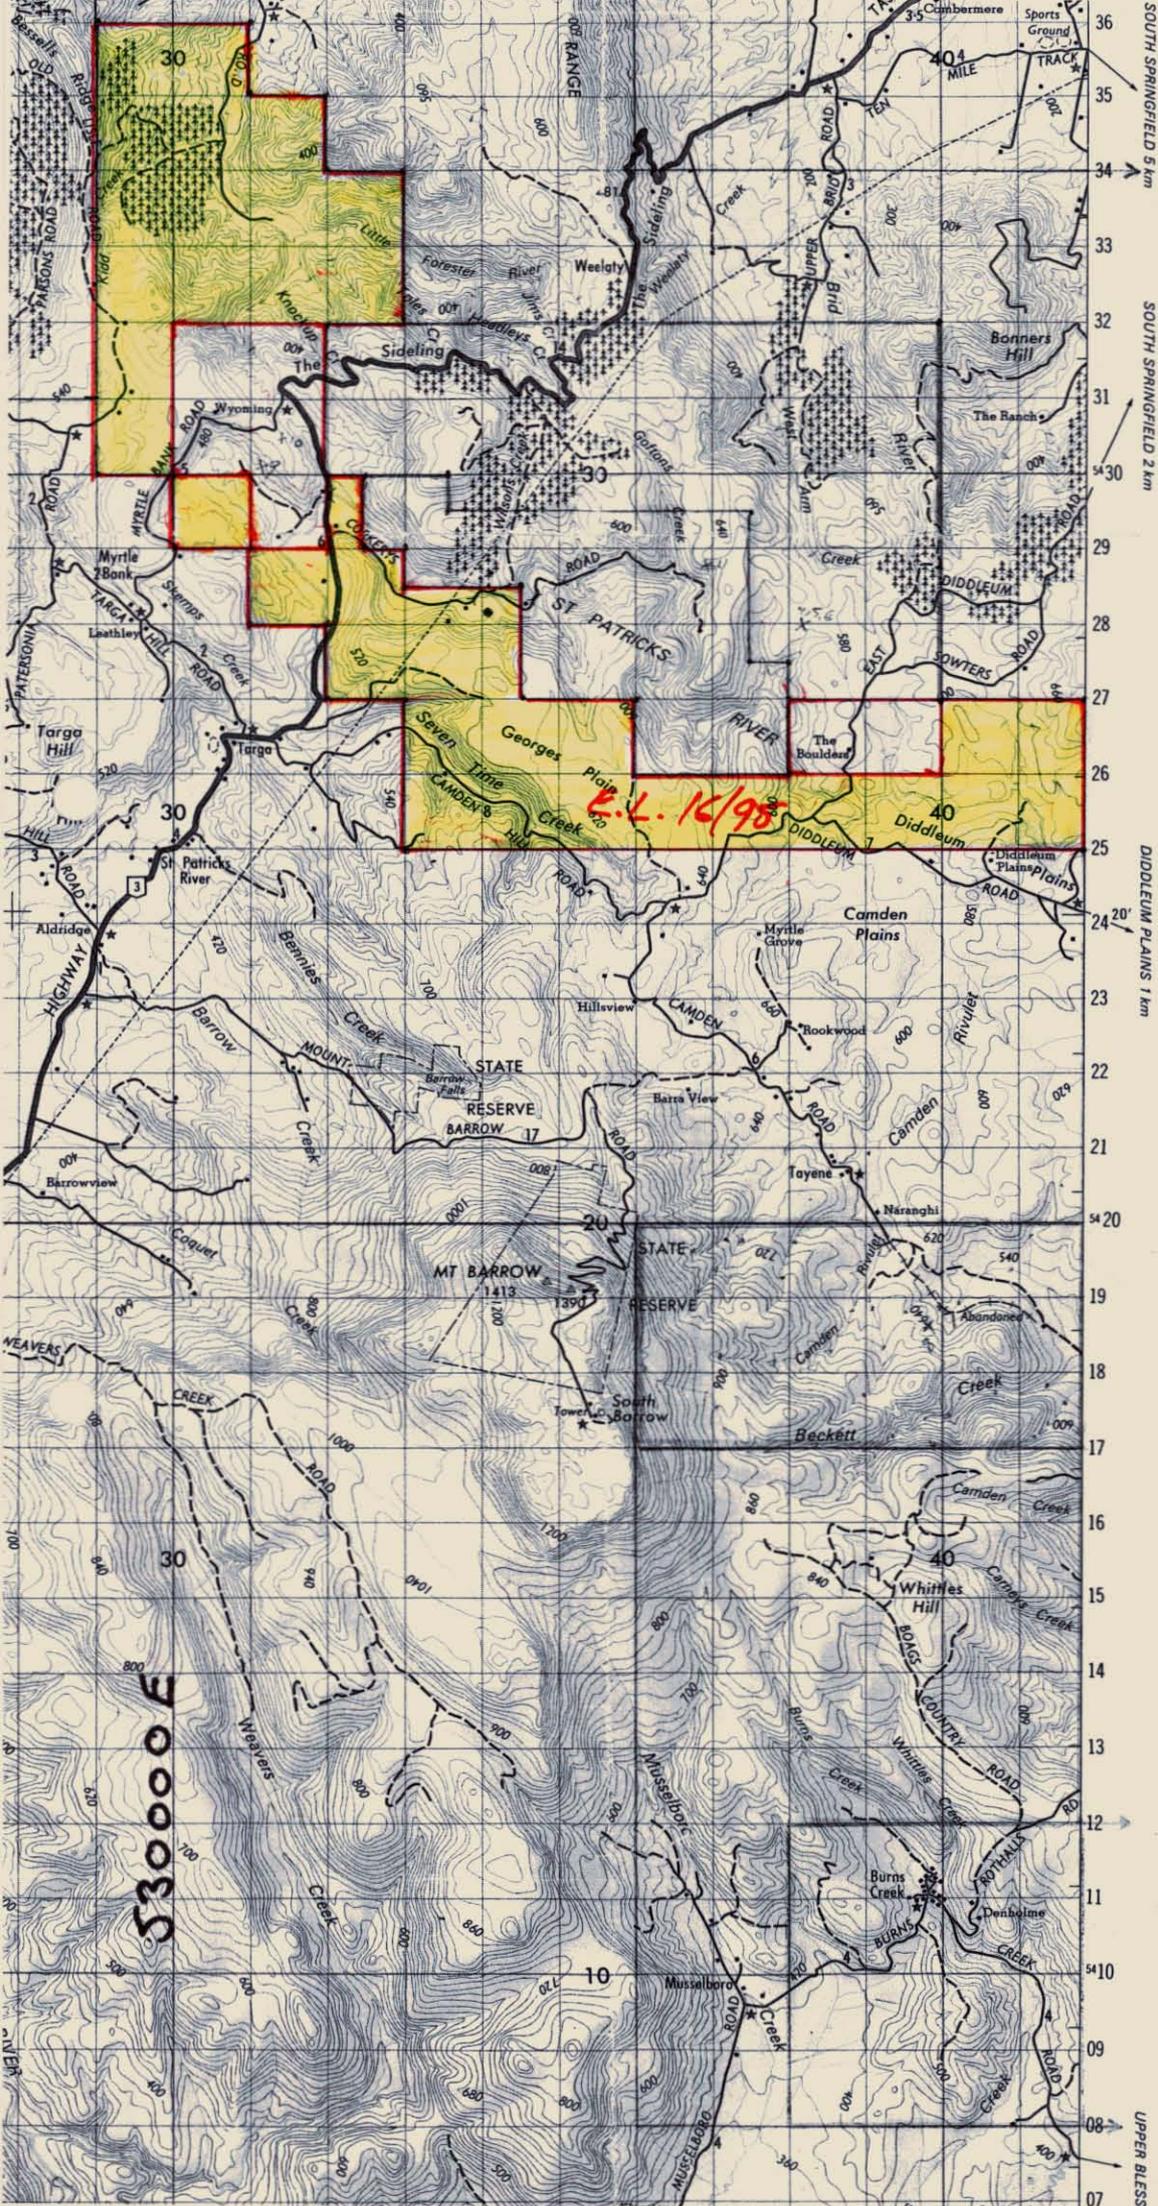

The country rock is Mathinna beds, basalt caps and Devonian granodiorite.

The tenement was considered prospective for vein style gold deposits. Following reconnaissance ground inspection of the whole licence area, it was decided that only two small areas were in fact prospective for this target model.

As a result of this inspection, of the total area of 43km<sup>2</sup> under licence, 36km<sup>2</sup> is to be relinquished (see attached map).
