10.12.98 to 9.12.98

CORNWALL COAL CO. N.L.

This exploration area is located 20 km north-west of Fingal, around Tower Hill. The Triassic coal measures contain at least 2 coal seams and the sequence is equivalent to that in the Mt Nicholas Range.

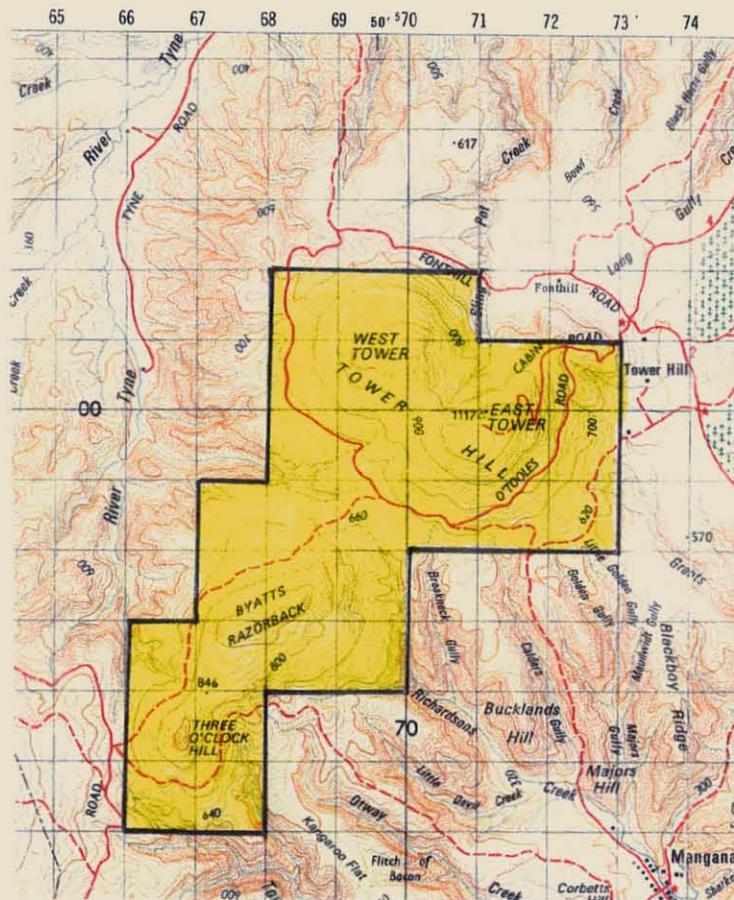

In the current 12 months there has been no exploration, except for several road traverses that identified possible drill sites.

The extent and location of RL8814 is shown on the accompanying plan. Drilling is planned in late November in the vicinity of Byatts Razorback and Three O'Clock Hill.
