Group Symbol (unified soil classification system): \_\_\_\_\_

Geological Description: Permian Siltstone

History: - Proposed inclusion in Regional Park.

Remarks: Sampled. Long & continuous operation on both sides of creek. Extends about 1.5km up Stringy Bark gully. There are a number of pits some as large as 50x50x5. Because of the no. of pits and scrapings and the bad erosion which has taken place it is difficult to estimate size. The whole area is now used as "scrap" metal dumping area.
