Special Tests:

Group Symbol (unified soil classification system): G.P.-G.M.

Geological Description: moderately weathered dolerite

History: Pit created by Huon Council about 18 yrs ago + has been worked on and off for road works.

Remarks: At present in disuse because larger pit next door more suitable, there are many large boulders > 30cm diametre. Perhaps these too large for road repair?

whole hill weathered dolerite?

No suitable material to sample.
